Ricoh Embedded PCS Director

Centralized Copy Control

Minimizing document costs depends on accurate tracking. Now you can monitor every print, copy and scan made on Ricoh MFPs with a single, powerful solution: Embedded Print Copy Scan (PCS) Director from RICOH®. It provides centralized management of accounts and reporting for printing, copying and scanning, so you can reduce waste, curb excessive usage and never miss another chargeback.

Contain Document Costs

Embedded PCS Director enables precise control over document-driven costs.

- Reduce waste and control spending by centralizing management of all printing, copying and scanning performed on Ricoh MFPs throughout the organization.
- Perform accurate tracking without purchasing expensive external terminals. Users enter a predefined PIN code from the MFP display. PIN codes integrate with Windows or Novell user IDs in the PCS Director database.
- Extend the power of PCS Director software by combining print, copy and scan metrics in a single, detailed report.
- Recover costs with support for up to five fields of entry for chargebacks. Fields can be assigned to users, departments or clients.
- Help users select the right account quickly with optional drop-down menus and search-by-name capabilities.
- Control total output volumes. Set limits by user, application, color usage and many other attributes.

Easy and Cost-Effective

Embedded PCS Director is more cost-effective and easier to manage than competitive offerings.

- Get all the benefits of document control — including lower total cost of ownership and process improvement — without compromising the budget.
- Reduce the burden on IT. Unlike other offerings, Embedded PCS Director has no external terminals that require separate IP addresses and network connections.
- Install Embedded PCS Director on Ricoh MFPs as a simple firmware update that works in tandem with PCS Director software.

Card Reader Authentication

The card reader option allows fast authentication via proximity card.

- Accelerate authentication by eliminating the need for users to enter a PIN code.
- Monitor user MFP access with the same cards you use for building access.
- Attach an industry-leading HID, Casi-Rusco or NexWatch USB card reader kit (sold separately) to your MFP.

Embedded PCS Director controls user access to printing, copying and scanning via PIN codes.

This solution enables precise cost recovery for a variety of document activities and supports up to five entry fields for chargebacks.

The optional card reader allows users to authenticate with proximity cards.
